

QUALITY
TECH TOOL

For Quality Performance Cutting Tools, Contact Quality Tech Tool!

Quality Tech Tool has been making quality performance cutting tools for years to many well known industries such as aircraft, automotive, medical and defense.

QTT has the equipment, the knowledge and expertise to provide you with equal or better industrial carbide tooling as our competitors. Every tool designed at QTT uses the combined skills of our technicians and cutting edge equipment to create superior high performance cutting tools.

We are well versed in the exacting requirements that are placed on providing a full line of carbide tooling.

When your company needs the finest high performance cutting tools, contact Quality Tech Tool!

AlCrN, TiAIN, TiCN

Alcrona AlCrN (Aluminium Chromium Nitride)

Alcrona (AlCrN), produced in the INNOVA, is a Titanium free coating for broad application in machining and forming operations. Alcrona has remarkable wear resistance at lower speeds and feeds and under high mechanical loads. At higher speeds, where hot hardness and oxidation resistance are important, Alcrona excels, compared to Titanium based coatings, with an operating temperature up to 1,012°F. Alcrona is applicable to HSS and carbide tooling and for forming and forging operations, as well as cutting operations.

Alcrona has shown great results in machining a wide variety of hardened steels up to 70 HRC both with and without coolant as well as low alloy steels and high tensile steels.

Applications and Benefits

- Low alloy steels and high tensile steels
- Hardened steels up to 70 HRC
- Forming/punching/blanking and hot forging

Improved Performance with

- High speed machining
- Dry or MQL machining
- Higher productivity
- Color Blue - Grey • Coating Thickness 4 µm
- Microhardness 3200 HV • Coeff of Friction vs Steel 0.35
- Thermal Stability up to 1,100°C

Futura Nano TiAIN (Titanium Aluminium Nitride)

Futura Nano (TiAIN), produced in the INNOVA, is a great all round coating for both HSS and carbide tools, especially in applications where there is a high thermal load. TiAIN has a nanolayered structure which was engineered to give an optimum balance between hardness and internal stress. High internal compressive stresses help to reduce the propagation of cracks through a coating therefore delaying the onset of failure. TiAIN also has improved sliding properties.

Applications and Benefits

- Abrasive materials - cast iron and heat treated steel
- Difficult to machine materials, such as stainless steel
- Higher speeds and feeds
- Reduces or eliminates use of coolants

Improved Performance with

- Higher speed and feed machining
- Dry or MQL machining
- Machining of harder materials
- Color Violet - Grey • Coating Thickness 4 µm
- Microhardness 3300HV • Thermal Stability up to 900°C
- Coefficient of Friction vs Steel 0.3 - 0.35

TiCN (Titanium Carbonitride)

TiCN has a fine grain dense structure that provides excellent toughness and high hardness. TiCN is harder and tougher than TiN, consequently it exhibits a high resistance to edge chipping.

This coating is a good choice for milling, forming and punching tools that encounter high mechanical stresses. TiCN is also recommended for applications cutting highly abrasive and/or gummy materials such as cast iron, brass and some cast aluminium alloys. LVEB TiCN is extremely smooth.

Applications and Benefits

- High performance applications
- Difficult to machine materials
- Abrasive materials - cast iron and aluminium alloys
- Adhesive materials - copper and copper based alloys
- Higher speeds and feeds possible for enhanced machine productivity compared to TiN
- Wear resistance and toughness superior to TiN

Improved performance with

- Higher speed conventional milling
- Gear cutting tools
- Heavy duty stamping
- Plastic moulds and extrusion tools for plastics containing >30% glass fillers (abrasion resistance)
- Deep drawing tools
- Color Blue - Grey
- Coating Thickness 2 - 4 µm
- Microhardness 3000 HV
- Coefficient of Friction vs Steel 0.4
- Thermal Stability up to 400°C

**QUALITY
TECH TOOL**

AlTiN, TiN, ZrN

TiN (Titanium Nitride)

TiN was the first PVD wear resistant film coating introduced at Surface Technology Coatings, using the world's leading low voltage electron beam technology by Balzers of Switzerland. TiN is the standard general purpose coating for protecting a wide variety of tools and parts from wear. TiN is a good choice for the machining of iron based materials, die casting and plastic mould tooling.

TiN is also a good coating for wear part applications demanding resistance to abrasive and adhesive wear. TiN is also an attractive gold colour. LVEB TiN is extremely smooth.

Applications and Benefits

- General purpose use
- 3 to 8 times longer tool life
- Wide range of materials
- Higher tool speeds and feeds than uncoated tools

Improved performance with

- Wide range of cutting tools in both HSS and Carbide
- Plastic moulds and moulding machine parts
- Slitting knives for the plastic and paper industries
- Wear parts
- Medical and dental instruments
- Forming tools
- Color Gold - Yellow
- Coating Thickness 1- 3 µm
- Microhardness 2300 HV
- Coefficient of Friction vs Steel 0.4
- Thermal Stability up to 600°C

AlTiN (Aluminum Titanium Nitride)

AlTiN has very similar features to TiAIN. It is ideal for high temperature cutting operations in the same materials as TiAIN and has the same oxidation effect. AlTiN has a higher aluminum content which makes it much harder and smoother than TiAIN. It is ideal for smaller depths of cut and excels in high speed and dry machining applications and when machining hardened steel.

Applications and Benefits

- Used for nickel based alloys, stainless steel, hardened steels, and titanium.
- Extremely heat resistant
- Maximum Working Temperature = 800° C/1470° F
- Coating Thickness (microns) = 1-2
- Coefficient of Friction Against Steel (Dry) = 0.4
- Microhardness (HV 0.05) = 3500

ZrN

Zirconium Nitride (ZrN): The next generation of coating developed specifically for machining aluminum yet excellent when machining all non-ferrous materials. ZrN is also, highly recommended for machining fiberglass, nylon and most polymer materials.

Applications and Benefits

- Used for aluminum alloys, cast iron, high temperature alloys, stainless steels, and non-ferrous metals
- Very effective in glass filled plastics and wood

Improved performance with

- Maximum Working Temperature = 600° C/1110° F
- Coating Thickness (microns) = 1-2
- Coefficient of Friction Against Steel (Dry) = 0.55
- Microhardness (HV 0.05) = 3000

QUALITY
TECH TOOL**PC450 WITH AlCrN COATING***Multiple Flute - Standard Length*

Hurricane Mills are a proven innovation to conventional end mills. The unique multi-flute geometry allows for an increase in tool RPM and feed rates while reducing vulnerabilities to chipping. AlCrN coating provides additional benefit with heat dissipation, improving performance and extending tool life.

PC455 WITH AlCrN COATING
5 Flute - Standard Length

PC455 Series end mills are designed for milling stainless steel, inconel, and titanium alloys. Heavy-duty construction allows for higher speeds and feeds, to increase production. A 45° helix angle promotes optimal shearing action, efficient chip removal with superior surface finish. AlCrN coating provides additional benefit with heat dissipation, improving performance and extending tool life.

DR235 COMBINATION DRILL COUNTERSINK

Straight Flute - 118° 4 Facet Point - 60° C'Sink Angle

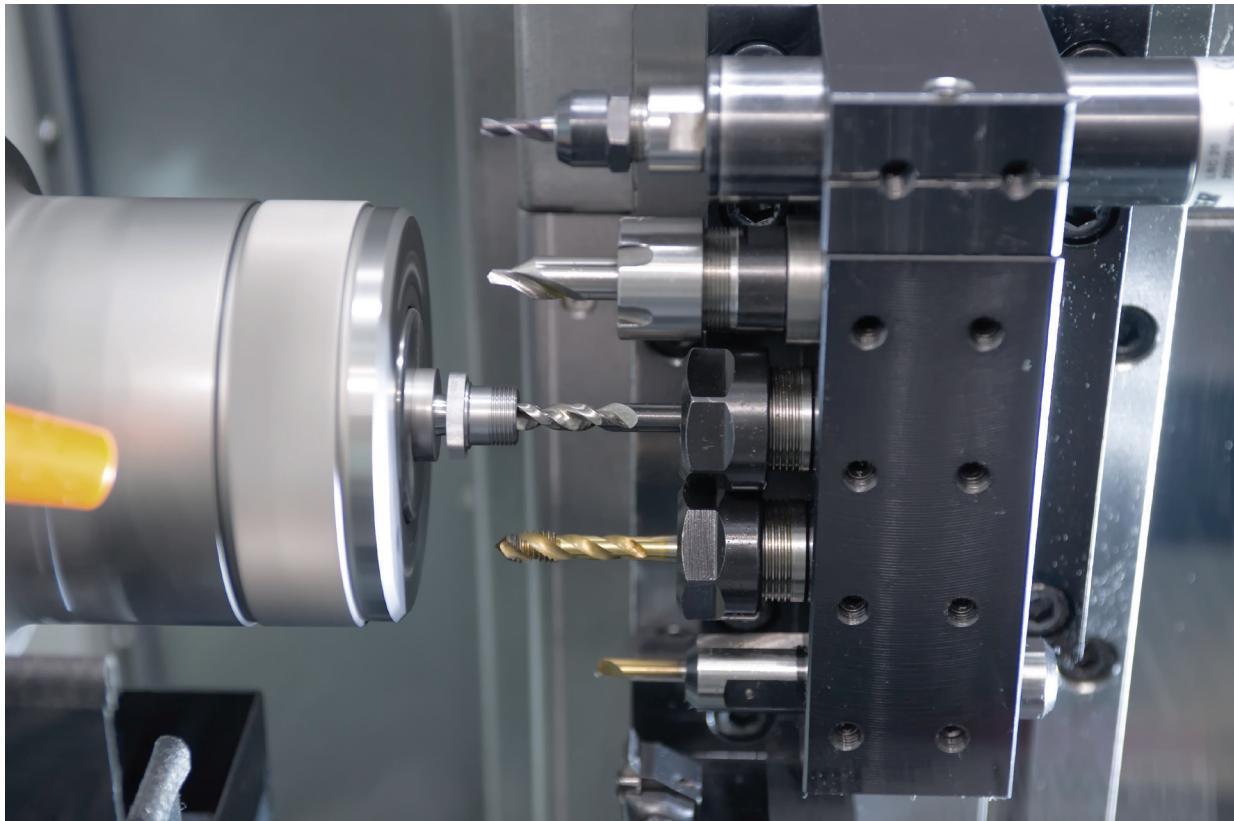

DR235 Series is a combination drill and countersink. The straight flute construction provides strength making it ideal for working with difficult materials. A 60° included countersink angle is standard. Other countersink angles can be made to order by request.

EM440 FAST CUT

2 Flute - Standard and Long Length

These FAST CUT end mills were designed specifically for milling aluminum and non-ferrous materials. The unique geometry permits higher speed and feed rates without loading. Spindle and feed rates can be increased by 50% for greater productivity without compromising finish.

Special sizes, coatings, flats and radius available upon request.

EM447

4 Flute - LHS/RHC - 30° Helix

A four flute end mill ideal for profile milling, particularly when working with thin material. The cutting forces are directed up to provide greater rigidity, therefore not suited for slotting applications. All tools in this series are right hand cut with center end cutting geometry.

EM460

3 Flute - High Helix

Constructed to mill stainless steel, titanium, inconel and other similar metals where high cutting forces are generated. A high helix angle allows for and increased length in cutting edge engagement, reducing cutting load variations and prolonging tool life. Designed for excellent surface finish with high speed and feed capabilities.

RD500, RD502*2 and 3 Flute - Straight*

Routers provide clean and fast cutting action, smooth finishes and excellent tool life. Carbide routers have a high rake angle and a sharp cutting edge with added clearance geometry to ease shearing and chip expulsion. For use on aluminum, copper, magnesium, hardwood, plexiglass, plastics, formica and hard rubber.

Fiberglass Routers - Micrograin Carbide

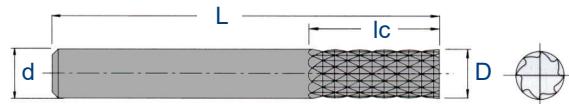

INCH

**QUALITY
TECH TOOL**

FR640 Fiberglass Routers

FR640 series solid carbide routers are: multi-flute, 30° left hand helix, right hand cut, straight shank, single end tools and are available in four end cut styles. These routers are for use on phenolic epoxy parts, polyester glass reinforced products, graphite composite laminates and certain grades of kevlar material.

Styles of Cut

Double Cut

Engineered specifically for tough applications. Tough cut insures faster, splinter-free cutting in weld and alloy castings with increased tool life.

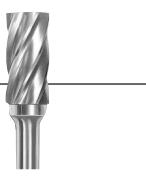

Medium Right Hand Spiral

General purpose, recommended where fair stock removal and smooth finish are required.

Aluminum Cut

Designed for use on aluminum, non-ferrous metals, soft steel, reinforced plastics, and other soft materials.

Coarse and Fine Cuts are available on request.

Recommended Cutting Speeds for Carbide Burs

Diameter	R.P.M.	Maximum R.P.M.
1/16"	55,000 - 85,000	90,000
3/32"	50,000 - 60,000	85,000
1/8"	35,000 - 65,000	80,000
3/16"	30,000 - 55,000	75,000
1/4"	25,000 - 50,000	70,000
5/16"	18,000 - 38,000	65,000
3/8"	17,000 - 38,000	63,000
7/16"	13,000 - 37,000	55,000
1/2"	14,000 - 36,000	50,000
5/8"	11,000 - 23,000	40,000
3/4"	8,000 - 19,000	30,000
1"	7,000 - 18,000	25,000

NOTE: Use Lower Speeds when cutting harder ferrous materials and Higher Speeds for softer non-ferrous materials.

Aluminum Cut Burs are designed for use on:

- Aluminum
- Non-ferrous metals
- Soft Steel
- Reinforced plastics
- Other soft materials

Also provides excellent work finish with minimum loading when cutting soft, sticky materials.

AEROSPACE SPECIALS

AIRCRAFT TOOLS MADE TO ORDER**Nutplate Drill/Countersink**

Carbide drill and countersink with 135 degree split point. External thread and 60 degree cone seat straight shank style with pin spanner wrench holes. Application: Nutplate and motors with nutplate pressure foot attachments.

**2 & 3 Flute Piloted Countersink**

Designed with a safe, integral piloted construction. The threaded shank style is an excellent choice for portable drill motors and its precision ground fluting geometry generates a clean, bur free accurate seat for aircraft fasteners.

**Integral Piloted PCD Countersink**

The Integral Piloted PCD Counter-sink is designed for customer specific applications of machining as well as assembly. They are made with a controlled fillet radius.

**Carbide Tapered Reamer**

Our carbide tapered reamers are designed for finishing hole sizes in composite materials. The geometries incorporated into the design of these tools produce excellent results; flaking, tearing, and cracking in laminate materials are minimized.

**Compression Router**

This carbide router is designed primarily for use with composite and honeycomb materials. This design with opposing flutes compresses the material to produce an excellent finish on both sides of material being routed.

**Diamond Cut Router**

The carbide diamond cut router is used in a variety of materials including graphite composite materials. Available in a four styles of end cut, depending on the specific application.

**Dagger Drill**

This carbide drill is designed to produce holes in composite materials without delamination around the hole or fraying the composite material.

**Threaded Shank Coolant Fed Straight Flute Drill**

This coolant fed straight flute drill was used to drill through a combination of aluminum and composite materials. This style of drill can also be adapted to take a PCD tip for extended tool life.

**VT58**

The VT58 offers fast feed and speed rates. This 1.5hp has an improved diameter tolerance with superior hole finish. No erosion of liquid shim or delamination in composite material.

**VT68**

The 2.5hp VT68 has a positive feed drill motor with interrupted cut feature. Our VT68 offers fast feed and speed rates and improved diameter tolerance with superior hole finish. No erosion of liquid shim or delamination in composite material.

**QUALITY
TECH TOOL**

AIRCRAFT TOOLS MADE TO ORDER

NAS 937 Jobbers Length Double Margin Step Drill

Carbide drill with 135 degree split point. Used for drilling close tolerance holes in low tensile strength materials. Can also be supplied in taper and screw machine lengths, or special lengths.

Threaded Hex Shank Adapter Drill

Carbide adapter drill manufactured to NAS 907 construction with 135 degree split points. Used for general to medium duty drilling in low tensile strength materials in confined areas.

Threaded Square Shank Adapter Drill

Carbide step adapter drills are manufactured similar to NAS 907 construction with 135 degree split points. Used for drilling hard, tough, high tensile strength materials in confined areas.

Kevlar Drill

Kevlar, and similar woven materials pose many problems with quality of exit hole quality. The unique brad and spur inspired point cuts a clean hole with elimination of fraying experienced with conventional drill points.

Threaded Shank PCD Reamer

This straight flute PCD "polycrystalline diamond" reamer is available with or without threaded shank and with or without a pilot diameter.

Spacematic Drill/Countersink

Carbide drill and countersink with internal thread and 60 degree cone seat straight shank style with pin spanner wrench holes or optional wrench flats for slotted type drill wrenches. Application: Spacematic Drill motors with 1" stroke.

Drivematic Drill/Countersink

Carbide drill and countersink with solid shank used in aerospace drivematic drill riveting machines.

PCD Straight Flute Router

This polycrystalline diamond straight flute router is used for machining as well as assembly operations. Available in a various number of flutes.

Herringbone Router

This carbide router is designed primarily for use with composite and honeycomb materials. This design with opposing flutes compresses the material to produce an excellent finish on both sides of material being routed.

AIRCRAFT MATERIALS

Drill Depth

Work Material		Graphite Composite		Epoxy Fiber		Acrylic Plastics		Graphite Composite Titanium Stack	
Speed (Feet/Minute)		210 SFM		210 SFM		161 SFM		16 SFM	
Drill Diameter Frac.	Dec. Equiv.	Speed RPM	Feed in/min	Speed RPM	Feed in/min	Speed RPM	Feed in/min	Speed RPM	Feed in/min
3/32	.0938	8,550	.0015	8,550	.0015	6,550	.0015	670	.0010
1/8	.1250	6,420	.0020	6,420	.0020	4,910	.0020	500	.0010
3/16	.1875	4,280	.0029	4,280	.0029	3,280	.0029	330	.0020
1/4	.2500	3,210	.0040	3,210	.0040	2,460	.0040	250	.0020
5/16	.3125	2,570	.0045	2,570	.0045	1,970	.0045	200	.0030
3/8	.3750	2,140	.0050	2,140	.0050	1,640	.0050	170	.0040
1/2	.5000	1,600	.0060	1,600	.0060	1,230	.0060	130	.0040

The chart above is for materials typically used in aircraft structures. Speeds may be less than optimal because of limitations in the portable machine tools utilized.

Hole Depth Diameter	Reduce Spindle Speed	Reduce Infeed Rate
3 x Dia.	10%	10%
4 x Dia.	20%	10%
5 x Dia.	30%	20%
6 x Dia.	35%	20%
8 x Dia.	40%	20%

When drilling deep holes, the recommended speeds and feeds should be reduced proportionately based on the hole depth. To the left are guidelines for reducing the speeds and feeds.

When drilling deep holes, the recommended speeds and feeds should be reduced proportionately based on the hole depth. To the right are guidelines for reducing the speeds and feeds.

Hole Depth Diameter	Reduce Spindle Speed	Reduce Infeed Rate
3 x Dia.	10%	10%
4 x Dia.	20%	10%
5 x Dia.	30%	20%
6 x Dia.	35%	20%
8 x Dia.	40%	20%

Above charts are primarily for machine tool applications, and does not reflect infeed rates because of the variety of machines that are used with countersinking applications. CS700 Series Single Flute Countersinks should be used on non-ferrous, low hardness steels, non-metallic applications, and used with a lower in feed rate as it is a single flute countersink. If excessive chatter or jumping of the single flute countersink is encountered, we recommend the CS706 Chatterless Countersink be used. In many cases, the use of countersinks is done in off-hand grinding applications with portable air grinders, which run at much higher speeds than those shown. The CS701 Series Countersink is typical of a Bur type construction. We recommend that several steps be taken to reach full depth with retractions to clear out chips.

Type 1 Routers should only be used for side cutting.

Type 2 Routers should also be used only for side cutting and for hand routing.

Type 3 Routers can be used for side routing and slot routing.

Type 4 Routers should be used only for side routing but have a drill point to facilitate entry into the material.

QUALITY
TECH TOOL

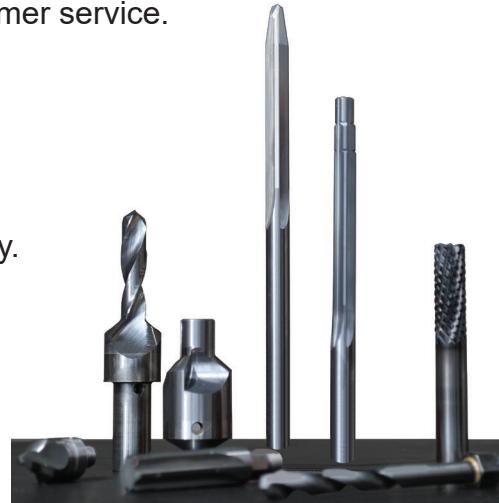

QTT MISSION

Quality Tech Tool is devoted to providing the highest quality carbide tooling available. This is an ongoing commitment achieved by continual innovations in our manufacturing equipment and production procedures. We are committed to the highest standards of excellence in our training, as well as in all aspects of our customer service.

QTT VISION

Quality Tech Tool's vision is to develop and expand the range of our premier tooling line with an assurance of product superiority.

Visit our website - qualitytechtool.com

Ordering Information

When ordering drills, end mills, reamers, burs and made to order tools, please reference the product number for each item.

Warranty

Quality Tech Tool warrants products sold are free from defects in material and workmanship. QTT will replace, repair or credit any product which does not comply with this warranty. Warranty does not apply to any products which have been misused, altered, or subjected to an accident or used beyond their normal life. Complete information as to usage should accompany any product returned under warranty.

Safety Precautions

Grinding or other use of tool may produce hazardous dust and fumes which may endanger health. To avoid adverse health effects, read product material safety data sheet. Utilize adequate ventilation and appropriate protection with cutting fluids. Cutting tools may shatter when broken, wearing eye protection is strongly advised.

Claims and Returns

Claims for damage, shortage or loss must be made within 10 days of invoice date. Tools cannot be returned without authorization from Quality Tech Tool and are subject to restocking fee.

Pricing

All prices are subject to change without notice.
